Course: Skills for IT Professionals

Project: Group Startup Project

Submission Date: **February 20, 2026**

1. Group Members & Roles (3-4 max)

Student Name	Email	Role in Group
Alex Marques	AM109@myscc.ca	Group Lead
Sawyer Burton	SB501@myscc.ca	Developer

2. Startup Idea (Working Concept)

Startup Name: Spotlight

Tagline: "Your talent, Our stage."

Type (For-profit, Non-profit, Social Enterprise): Social Enterprise

Brief Description:

As a company, we will combine with other high-end leading members of society to create an internet stream of resumes and ads from various suppliers and ensure they get to the right place, or to put you out there!

We actively work injunction with higher companies to filter advertising and resumes through a service to further push people's information into a grander scale of job searching, through expansive filters and human verified packets, we are experts in ensuring that companies will find you at your best when your information reaches them.

3. Problem You Are Solving

Industry leaders receive thousands of resumes; this ensures that leaders give each qualified resume a chance, and ensures they hire only the best.

ADDED CONTENT: Within marketing and advertising our company, we understand completely how difficult it is to navigate through the buzzing of big networks and services, making it hard to show the companies what they and you need most. This is done using our system to verify and support genuine people and companies who are attempting to push out their services through ads.

4. Intended Audience / Customer

The intended audience or customers of this new company would be any mainstream internet service, or anything related to highly stretched networks. These can consist of Google, WEtech, Amazon, Microsoft, Ubisoft, and Activision, using our systems to filter new applications and potential partnerships on the daily, never leaving them with a dry flux of applicants.

Google, WEtech, Amazon, Microsoft, Ubisoft, Activision, From Software

A perk for our audience and customers that we can work with is that we can reach and apply our services to many industries, from tech and AI, to gaming, to local industry leaders and even the medical field, firefighters, or our police that keep our society safe. We provide a service that can be accepted and useful to all. These companies can consist of...

5. Meeting Plan

In-Person Meeting Time(s): **Tuesday, February 17, 2026 @ 5:30pm & Thursday, February 19, 2026, 11:00am**

Online Collaboration Plan:

We plan on using online web services that revolve around keeping all its user's privacy protected and respected. These websites consist of Teams, a secured email link, and personal meetings in person to ensure progress.

ADD MINOR CONTENT: We also collaborate with companies using the communication applications which the companies frequently use, such as Microsoft Teams, Zoom, and Slack to communicate with the companies that trust us to bring value.

6. Tools the Group Will Use

The tools in question that will be used in making this vision of ours happen will be as follows:

Slack: A workplace communication tool that serves as a single platform for messaging, tools, and files.

Microsoft Teams: A service that helps people work together effectively, whether they're working from home or the office.

Zoom: A cloud-based video conferencing and collaboration platform that enables virtual meetings, webinars, and online communication for individuals and organizations.

Javascript: Is a dynamic, lightweight programming language primarily used to create interactive and dynamic web pages.

Java: Is a high-level, object-oriented programming language used for desktop applications, web applications, Android apps, enterprise systems, games, and cloud-based solutions.

MySQL: Is an open-source relational database management system widely used for storing, managing, and retrieving structured data.

Microsoft Excel

7. Agreement & Expectations

We agree to participate, communicate, and complete tasks responsibly.

Phase 2 - Business Model Development

Complete all sections below. This document is designed to be filled in electronically.

1. Key Features or Services

Firstly, our service ***Spotlight*** takes in resumes sent in by suppliers and goes through the process of a small questionnaire consisting of what career you plan to follow with, the steps you've taken to get to this point, and your overall qualities to better filter your resume and advertisements through the correct channels, displaying it to big companies we are partnering with, and companies we strive to have business with.

Our main feature is to push our user's information into a wide network to better their chances of being hired by a company, or partner with one through us as a reference or as a representative of said user.

For example, let's say Steven, a 21-year-old college student, is planning on applying for a high-end tech firm, but cannot find the proper channels of getting a hold of their hiring opportunities. This is where we come in, we do the research, we give them the network pathway to reach that tech firm personally, or others with similar opportunities varying on pay, hours, environment, and overall work ethic. Once they have the necessary pathway, they can reach out independently or through us and have us represent him when interview day comes.

2. Operations Overview

Describe the following:

- Staffing requirements

Staffing requirements follow the basic office etiquette, along with the fundamental tech operating skills based on your position. These qualifications include a full college degree in computer science, networking, and in website building. The person in question also must have some kind of corporate experience, if not they will be placed in a paid training position to get them qualified for a position.

- Manager or Owner

- Accountant

- HR member or representative (for interviews)

- Software Developers

- Technology or software needed

- Filter app

- Partnerships or suppliers

- Partnerships with industry leaders such as Amazon, Google, Wetech, Ubisoft, From Software, Activision, Shopify.

- Logistics (how the service/product will be delivered)

- The product is delivered as an application that we use to filter through the applicants.

3. Start-up Cost Estimate

List estimated start-up costs (approximate amounts are acceptable):

Item	Estimated Cost	Notes
Filtering algorithm	$7,000 / month	Subscription Fees
Employees	$20,000 starting With gross to $85,000 depending on pos.	HR / Rep, Accountant, Software Developer

Total Estimated Cost: ___$27,000_____
